Dear Sam

Re: TY - BIT Project

I have now met with TY with regard to his progress with the project he has taken on, looking at the development of a virtual home safety assessment learning package for occupational therapy students. These meetings have been very fruitful and it looks as if TY is progressing well with the concept. He has taken on board the comments and suggestions I have made and worked hard to incorporate these into his product. He is hoping to have a prototype ready by the end of the month and has requested that I get a small group of willing students from my school to try out the product. This looks to be a really interesting and exciting project, which if useable will meet a number of challenges we have in attempting to change the delivery of some of the courses we teach from face-to-face to on-line.

I look forward to our next meeting at the end of the month and seeing the concept becoming a tangible product.

Yours sincerely
